

Corals Vits

Is a total multivitamin supplement for corals and fish

PACKAGING

- **Nano Range,** Aquarium from 0 to 120 l (0 to 30 US gal)
Blister of 4 vials
- **Standard Range,** Aquarium from 120 to 1 000 l (30 to 250 US gal)
Boxes of 6, 12, 30 vials
- **Pro Range,** Aquarium from 1 000 & more (250+ US gal)
Box of 10 vials

Corals, fish and invertebrates are animals, and as such they are unable to synthesize all the vitamins they need, at least in sufficient quantities. Therefore, they must be supplemented by the food, even for photosynthetic organisms.

Prodibio is the first company being able to supply vitamins to corals from a homogenous single solution. Water soluble and lipophilic vitamins do not mix in nature, such as water and oil. Prodibio able to supply as many as 18 different vitamins in single product. The glass protects vitamins from the oxygen and the product is power efficient for the well-being of your fish and coral.

CORAL VITS is a hyper- concentrated solution containing all the vitamins needed for good coral growth and the wellbeing of fish in reef and seawater aquariums, without reaching doses likely to lead to hypervitaminosis (refer to instructions). Thanks to the patented Neogoutte® technology, associated with Prodibio's vials, the formulation and packaging of CORAL VITS assures the protection of water-soluble vitamins (B1 , B2, B3 (or PP) , B4 , B5, B6 , B7 , B8 (or H) , B9 (or Bc) , B12), as well as lipophilic vitamins (A, C palmitate , D2 , D3 , E, K1 , K2 and K3). **Furthermore, their release in the aquarium is gradual, thus promoting optimal assimilation by marine organisms.**

During the different steps of coral propagation, using CORAL VITS **accelerates tissue repair and reduces stress** for both the mother colony and the fragments.

CORAL VITS can be used in synergy with Prodibio's REEF BOOSTER. It can be added at the same time as Reef Booster, every 15 days. It can also be used alternately on one week, with Reef Booster added the other week. This second way to manage these sources of essential nutrients helps to **bring vitamins regularly** to corals and fish in the aquarium, and help their optimal growth.

DOSAGE FOR EACH PRODUCT

- **Nano Range :**
1 vial for 60 l (15 US gal) /15 days
- **Standard Range :**
1 vial for 200 l (50 US gal) /15 days
- **Pro Range :**
1 vial for 2 000 l (500 US gal) /15 days
